## A sirtuin 6 activator in the pipeline: New perspectives in depressive disorder treatment

Published On: April 30, 2024 | Pages: 001 - 004

Author(s): Ana Carolina de Oliveira Pereira, Gabriel Almeida Mendonça da Silva, José C. Barros and Raoni Schroeder Borges Gonçalves\*

Major Depressive Disorder (MDD) is among the most prevalent mental illnesses worldwide. Its symptoms include persistent feelings of sadness, loss of interest in previously enjoyed activities, and a lack of motivation for daily tasks. While FDA-approved medications are available, they often come with side effects, especially those targeting monoamine neurotransmitters ...
